

HOTEL MANAGEMENT SYSTEM

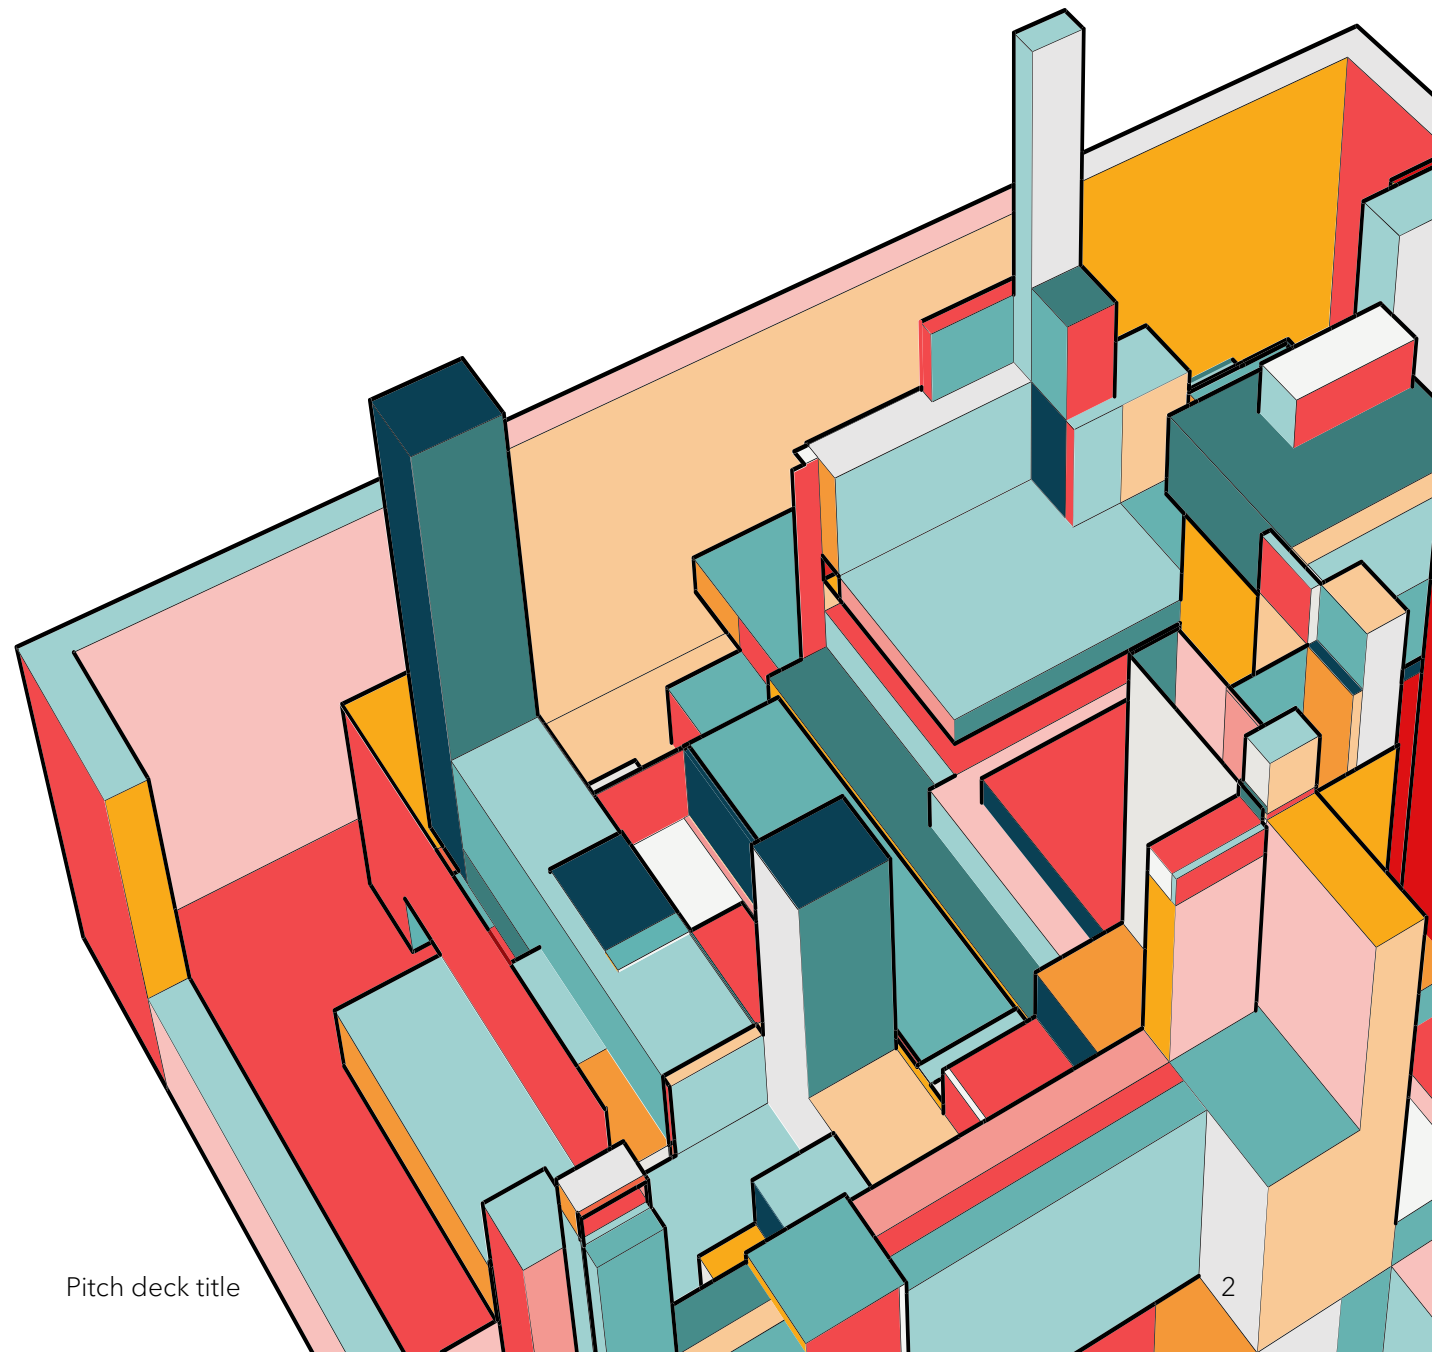

Arshman Afzal
Huzaifa Riaz

ABOUT US

The application is about the booking a hotel room for the customers.

We have different modules in this application.

- Add Room
- Add Customer
- Book Room
- Update Customer

FEATURES

Add Customer

This will take the name phone number and some other field related to the customer and add the customer to the Database using JDBC driver.

Add Room

We have the module to add the room to the software which is required first in order to book the room.

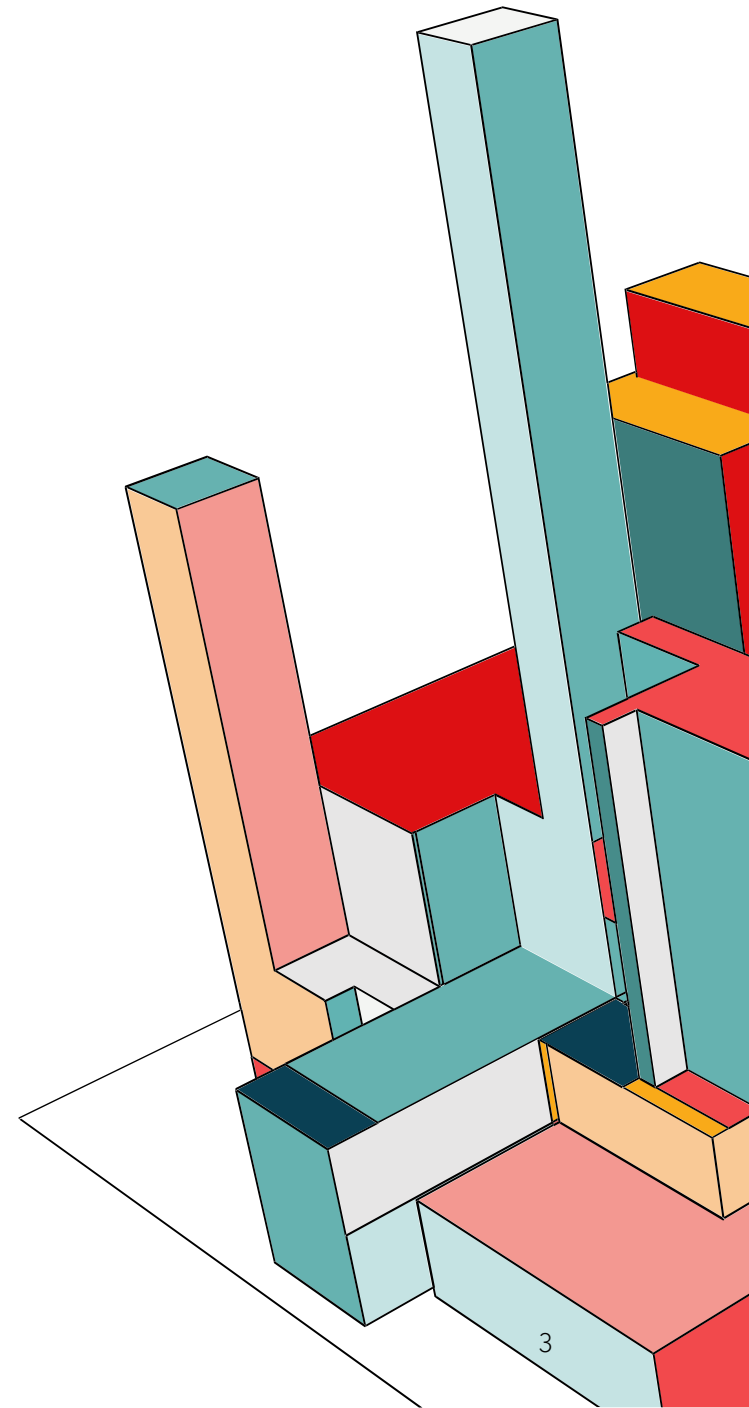

The room should be first added in the database in order to book the room.

Update Customer

If a person wants to update his personal details we have the module to update the customer's details

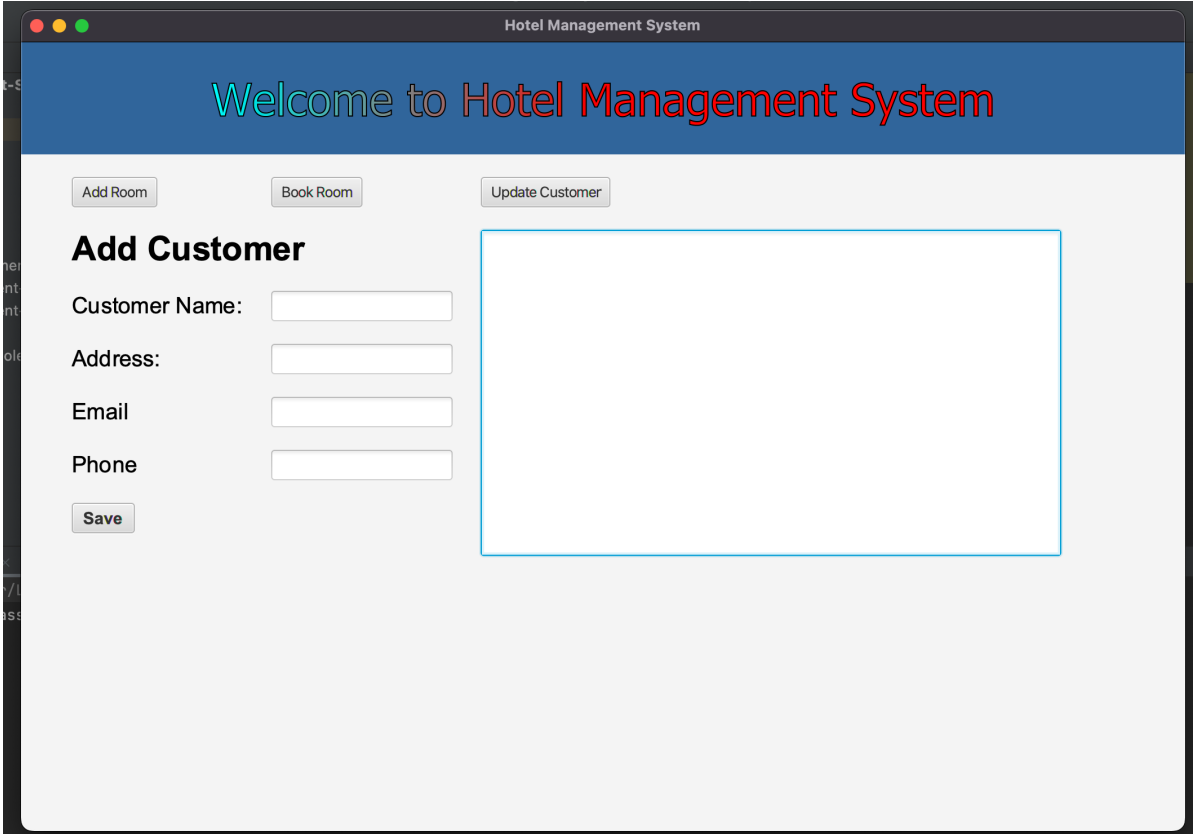

Book Room

The admin can book the room for a customer using the GUI application.

SCREENSHOTS

Add Customer

The screenshot shows a web application window titled "Hotel Management System". The header bar is blue with the text "Welcome to Hotel Management System" in a stylized font. Below the header, there are three buttons: "Add Room", "Book Room", and "Update Customer". The "Add Customer" section is highlighted. It contains a form with the following fields: "Customer Name:", "Address:", "Email", and "Phone", each followed by a text input box. A "Save" button is located below the "Phone" field. To the right of the form is a large, empty rectangular box with a blue border.
